Business Analytics | Data Analysis | SQL | Python

gujjalabhanu94@gmail.com | +91 8143183793 | linkedin.com/in/gbhanu18 | github.com/gbhanu18

Professional Summary

Computer Science graduate (B.Tech, 2026) seeking an entry-level Business Analytics role in credit card and consumer banking. Skilled in Python and SQL for data cleaning, exploratory data analysis, and data visualization, and currently completing a Data Science course covering statistics and machine learning. Built two data-driven projects end to end, from data preparation and analysis to model building and reporting predictions through APIs and web interfaces. Eager to apply analytical thinking to portfolio performance, customer engagement, and profitability, and to communicate fact-based recommendations to business partners.

Technical Skills

Data Analysis & Reporting: SQL, MySQL, Python, Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization, Statistics (coursework)

Machine Learning: Machine Learning, Deep Learning, CNN, Transfer Learning, Computer Vision, TensorFlow, Keras, OpenCV

Backend & APIs: FastAPI, Flask, REST API Development

Tools: Git, Jupyter Notebook, Google Colab, Linux

Languages: English, Telugu, Hindi

Experience

Python Development Intern

Techoctanet Services Pvt. Ltd.

Projects

AI-Based Crop Disease Detection Platform

Python, TensorFlow, Keras, OpenCV, FastAPI, React

- Analyzed a manual crop-inspection problem that delayed detection and reduced yield, and built a CNN classifier on DenseNet121 to identify off-type sunflower plants from images.
- Prepared and preprocessed a custom image dataset, then fine-tuned the model with transfer learning to improve classification accuracy while reducing training time.
- Developed a FastAPI REST service with modules for data ingestion, preprocessing, and prediction, delivering results in real time.
- Integrated a React frontend to visualize predictions for real-time monitoring.

FashFit: AI-Based Personalized Outfit Recommendation

Python, TensorFlow, OpenCV, Flask, JavaScript

- Built a data-driven recommendation system that uses skin tone analysis to improve outfit relevance and user engagement.
- Designed a feature extraction pipeline with TensorFlow and OpenCV to analyze garment color, pattern, and style attributes.
- Developed Flask APIs that process user images, extract features, and generate suggestions through matching algorithms.
- Created a web interface with HTML, CSS, and JavaScript for image upload and results display.

Education

Kalasalingam Academy of Research and Education, Tamil Nadu

2022 – 2026

B.Tech in Computer Science and Engineering | CGPA: 7.8/10

Narayana Junior College, Anantapur, Andhra Pradesh

2020 – 2022

Intermediate (MPC) | 67.8%

Sri Chaitanya School, Dharmavaram, Andhra Pradesh

2019 – 2020

Secondary School (10th) | 98.5%

Certifications

- Python Essentials 1, Cisco
- Database Management System, Codetantra
- AI for Beginners, HP

Activities

- Participated in HardWareX'25 Hackathon, Vellore Institute of Technology
